# **Installation Requirements**

#### FLOOR

Painted or tiled concrete slab.

Non- rigid floors can affect the stability of the machine and are not recommended (wooden joists, floating parquet with foam, etc.) **OPERATING TEMPERATURE** 

Between 10 to 35°S

## POWER SUPPLY

400V three- phase + neutral + earth.

32A curve D circuit breaker. 300mA differential circuit breaker. Arrival required in the immediate vicinity of the control cabinet. COMPRESSED AIR

Pressure strictly between 8 and 10 bars. Compulsory air drying device(4)

Flow greater than 350 l/ min.

### **CEILING HEIGHT**

Greater than 2750 mm.

Below this value, the suction hose holding rod can no longer be used and another hose holding mode must be made on site (rail + sliding parts, elastic strap, etc.). In any case, the ceiling height cannot be less than 2400 mm.

#### HANDLING MACHINE

For lifting, only use the sheaths located under the frame. Check the capacities of the forklift before any handling.

To move the machine on the ground, two conventional pallet trucks (2500 Kg) can be used on either side of the frame.

(4) The "parts" warranty does not cover damage caused to pneumatic elements (milling spindle, solenoid valves, FRL, pressure sensor, etc.) by the presence of humidity in the compressed air.
